1- Introduction:

Creative intellectual practice is one of the most noble human practices, and from these practices the cultures of nations crystallize and the adoption of civilizations. Therefore, its members deserved to be honored and appreciated, and to protect their production in all its literary, artistic and industrial forms, and to enable them to exploit their intellectual rights arising from this production; To protect their rights and surround them with a reassuring stimulating environment that helps create and develop deposits.

2- Policy (Plans):

Al-Jouf University adopts objectivity, integrity, and ethics when carrying out research activities, and applies policies for this purpose in line with nationally and internationally recognized laws and practices. Al-Jouf University also establishes policies for preserving intellectual property rights that include:

3- Copyright:

is an intellectual property right. The product of intellectual work is protected from research work in various fields of science, literary and artistic, and this includes innovative works, including literature, music and fine arts such as drawing and sculpture, symbols, names, pictures, models and industrial designs, in addition to technical works such as software and databases.

4- Utility right:

It is a simple invention or a small patent as a research product, and it is a type of right under which the law protects a technical means that does not reach the limit of the invention and is easier, faster, less expensive to obtain, and for a period of less patent protection.

5- Plant Varieties:

A type of rights granted by law in respect of new and prominent plant works that they are entitled to monopolize and use.

6- Patent:

Patent: The University is committed to supporting the patent registration process for university employees and marketing the patent

7- Forms of attacks on Intellectual Property:

1. Selling or renting the work without the permission of its owner.
2. Publishing it via the information network without the permission of the owner of the work.
3. Violation of the material or moral aspect of copyright.
4. Commercial exploitation of the patent without the knowledge of other parties.

8- Intellectual Property and Scientific Research:

A policy for intellectual property has been established for scientific and research institutions so that they can achieve the following:

1. Dissemination and marketing of scientific research.
2. Developing the performance of scientific institutions by improving their material situation.
3. Increasing the relationship between these scientific and research institutions and the industrial sector.
4. Encouraging researchers to invent and innovate) Increase the number of patents registered,

9- Procedures taken to guarantee(ensure) intellectual property rights:

Steps that are taken to ensure intellectual property rights:

A sub-committee emanating from the university's ethics committee to protect the intellectual property rights of members of teaching staff and graduate students, and the tasks of the committee are:

A- Working to enhance respect for intellectual property within the university and suggest the necessary policies and procedures for this

B. Preparing a detailed guide to clarify the university's intellectual property rights policies and publishing it on the university's website.

C. Establishing an integrated electronic system that clarifies the committee's objectives and tasks, as well as responding to members 'and students' inquiries through the committee's website.

D. Conducting periodic monitoring of the works issued by the university to prove any infringement of intellectual property through specialized computer programs in this regard.

E. Contacting all concerned departments within the university to receive complaints from members and students formally and quickly verify them, for example when an attack on intellectual property occurs, the author submits a request to the Intellectual Property Protection Committee requesting that the necessary measures be taken to preserve his rights.

The committee's scientific team makes a detailed description of the original and new work and makes a comparison between them, and if the abuse is proven, a report is submitted to the university president to take the necessary measures.

(1) When the damage resulting from the assault is proven, publishing the work will be suspended, and the author will be compensated for the damages suffered, whether moral or material damages.

(2) The author alone is the owner of the right to make modifications to his work, and it is not permissible for any party without any modifications to the work without the author's consent. Except in cases of translation, modifications can be made to the work without the author's consent, provided that these amendments are indicated. The author also has the right to withdraw his work from circulation in order to introduce amendments or refrain from publishing it again.

(3) The protection prescribed by the university for intellectual property rights does not include mere ideas, such as quoting a scientific research idea, method of work, or basic concepts if they are expressed, described or included in a work, provided that those quotations are indicated in the new work.

(4) The author's intellectual property rights shall be forfeited in the event of his death, unless he has an heir that the intellectual property rights are transferred to him or in the event that the author assigns all or some of his rights, provided that the agreement is in writing and specified.

(5) The university spreads awareness of the culture of intellectual property rights and the controls of authorship through the website of the Deanship of Scientific Research and the main display screens as well through posters and signboards in the central library of the university.

(6) The university is committed to intellectual protection for the cultural, commercial and social initiatives presented to the university and thus encourages initiators to invent and innovate and prevent competitors from exploiting the ideas of the initiators and benefiting from them through the program of intellectual property protection and technology licensing.

10- The objectives of the intellectual property protection and technology licensing program:

1. Encouraging inventors to register their inventions through simple procedures.
2. Enhancing the respect for the rights of intellectual property
3. Developing technology locally and building a knowledge-based economy.
