## Program foundation

As a result of increased demand for sophisticated computing environments, applications, and scientific research inside and outside of the academic field, today's organizations in both public and private sectors need high qualified graduates relevant to the workplace. Jouf University is committed to developing employable graduates in the field of computer science through establishing this program and achieving its goals and objectives. Specifically, the program was established for the following reasons:

- To compensate the shortage in computer science specialty for the local and regional communities.
- To increase the level of dependency on national graduates.
- To offer training, consultancy, and services in the field of Computer Science to the community.
- To prepare graduates for higher studies in computer science domain.
- To contribute to the technological development plans of the Kingdom of Saudi Arabia as a partial fulfillment of the national development plan.
- Contribute to achieving the vision of the Kingdom of Saudi Arabia 2030.

The program contributes to the mission of the college as well as the university. It focuses on preparing cadres in the domain of computer science to serve the local as well as regional communities in different aspects of technological development.

## Program vision

Excellence locally and internationally in education, scientific research and community service in the field of computer science.

## Program mission

Providing distinct educational, professional, research and societal outputs locally and regionally in the field of computer science consistent with quality standards and contribute to filling the needs of the labor market and community service.

## Program Goals

- Creating an attractive and integrated academic environment that provides equal opportunities for learning and developing various skills for program's stockholders.
- Contributing to enhancing the academic reputation of computer science program.
- Providing educational outputs that meet the requirements of the local labor market.
- Supporting and enhancing knowledge production in the field of computer science.
- Enhancing the benefit of local community from the field of computer science
- Achieving business sustainability in the program

## Program learning outcomes

|  | NQF Learning Domains and Learning Outcomes | Teaching Strategies | Assessment Methods |
| :---: | :---: | :---: | :---: |
| 1.0 | Knowledge and understanding |  |  |
| K1 | Recognize the concepts of computing and mathematics appropriate to the discipline | -Lectures <br> - Tutorials <br> -Self-learning <br> - Handouts <br> - Problem Solving <br> - Class <br> Discussions | - Exams <br> - Assignments <br> - Quizzes <br> - Homework |
| K2 | Recognize the essentials of design, implementation, and evaluation of computer-based system, process, component, or program to meet desired needs |  |  |
| K3 | Define the computing requirements to solve computer-based problems and state them in appropriate forms. |  |  |
| 2.0 | Skills |  |  |
| S1 | Analyze a complex computing problem to apply principle of computing and other relevant disciplines to identify solutions. | -Lectures <br> - Tutorial <br> -Lab activities <br> - Group Working <br> - Handouts <br> - Class Discussions <br> - Case study | - Quizzes <br> - Homework <br> - Exams <br> - Assignments <br> - Rubric-based Project Report <br> - Presentation <br> - Lab Exam/ Lab reports |
| S2 | Design a computing -based solution to meet a given set of computing requirements in the context of the program's discipline. |  |  |
| S3 | Apply computer science theory and software development fundamentals to produce computing-based solutions. |  |  |
| S4 | Identify user needs and take them into account in the selection, creation, evaluation and administration of computer-based systems. |  |  |
| S5 | Communicate effectively in a variety of professional contexts |  |  |
| 3.0 | Values |  |  |
| V1 | Recognize the professional, ethical, legal, security and social issues and responsibilities | - Lectures <br> - Tutorials <br> - Reading Lists <br> - Group Working <br> - Self-learning <br> - Class Discussions | - Rubric-based Project Report <br> - Class Graded Discussion <br> - Summarizes reading <br> -Lab Exam/Lab reports <br> - Graded Class Discussion |
| V2 | Function effectively as a member or leader of a team engaged in activates appropriate to the program's discipline. |  |  |
| V3 | Identify the local and global impact of computing on individuals, organization, and society. |  |  |

## Program graduates' characteristics

- An ability to apply mathematical foundations, algorithmic principles, and computer science theory in the modeling and design of computer-based systems in a way that demonstrates comprehension of the tradeoffs involved in design choices.
- Analyze a problem, and identify and define the computing requirements appropriate to its solution.
- Design, implement, and evaluate a computer-based system, process, component, or program to meet desired needs.
- Function effectively on teams to accomplish a common goal.
- Adhere to high scientific and societal values and norms.
- Seeks to serve the community.
- Communicate effectively with a range of audiences.

## Fields of work

- Programming and software engineering.
- Software developer
- Computer technical support
- Computer Scientist / Researcher
- Computer systems manager
- Computer Scientist / Researcher
- Network Security Manager
- Information Technology Specialist
- Contribute to the development and programming of information systems.
- Management and participation in the design of computer networks.
- Multimedia Developer
- Database Administrator
- Database Analyst
- Database Administrator
- Database developer
- Website design and development.
- Working in teams on smart applications or using data.

## - Admission requirements

- Passing the university preparatory year according to the admission rates determined by the scientific department of the program.
- The details of the admission requirement are available through this link.

## Curriculum study plan

The study in the computer science program is divided into 8 levels according to the following schedule. The students should pass 133 credits.

| Curriculum Study Plan |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| \% | Course Code | Course Name | Required or Elective | * Pre- <br> Requisite Courses | Credit <br> Hours | GE/ Math \& Sc. / College / CIS |
| First Year (Preparatory Year) |  |  |  |  |  |  |
| ت | $\begin{gathered} \hline \text { ENGL } \\ 001 \\ \hline \end{gathered}$ | English Language (1) | Required |  | 6 | GE |

## Program advisory committee

The program advisory committee is constructed as follows:

- Dr. Ibrahim Alrashdi ( department chair)
- Dr. Youssef Al-Hwaiti ( assistant professor)
- Dr. Asyaa BenAliaa (assistant professor girls Section.)
- Dr. Abdoallah Alamery (assistant professor Baha university)
- Mr. Eid Almubarak ( IT manger in education sector in Jouf)
- Mra. Asmaa Yahia ( IT manger united Ahli Bank)
- Mr. Ahmed Mohialdin ( IT manger in secure networks institution)

The committee have periodic meetings with the following responsibilities:

- Contribute to developing future plans to meet current and future challenges.
- Improving research, development and consulting methods
- Provide advice, guidance and advice regarding the development of the academic program.

## Program regulations

The graduate studies' unified regulations of Saudi universities and its executive rules will be applied at Jouf University with regard to admission requirements, graduation rules, obtaining a degree, as well as the additional criteria for the program. For more details you can visit the following links:
The skill record

| Student club rules |  | https://bit.ly/35ET7wR |

| Study rules and exams |  | $\underline{\text { https://bit.ly/39t7pSi }}$ |

## Student Administration and Support

## Student academic counseling

Each student is assigned to an academic advisor who will act as a mentor, providing academic and career advice, and general counseling. Each student is required to meet his advisor at least once a week, during the eighth semester. The Academic advising center of the university provide support to the students in the form of hosting extracurricular activities, field trips, and seminars by inviting guest speakers and providing an interactive learning environment. The Head of the Department is also available to meet the students and listen to their academic problems and concerns. The general advising duties can be stated as follows:

- The academic advisor is expected to deal with students' academic, career, and personal problems.
- The academic advisor helps his/her advisee students select the appropriate courses in order to fulfil the
- graduation requirements.
- The academic advisor helps the student explore the career fields within his/her major, and obtain
- related career information and survey job opportunities.
- The academic advisor serves as a link between the student and the administration by counseling the
- student on matters of failure, on the procedures for dropping and adding courses, course scheduling, and academic progress.
- The academic advisor must alert students of any subsequent changes in the curriculum that might be enforced during the course of their studies.

## Learning resources, facilities and equipment

Courses instructors are requested to select textbooks that are commonly used by top universities in the world. Also, they are required to specify other teaching materials they need. The course coordinators submit all the department requests in appropriate form to library administration through departmental head. Course files are prepared for all courses where textbooks and helping materials are included. The faculty offer various facilities for leering such as:

- Fully equipped laboratories for teaching all subjects.
- A large number of scientific references were provided in coordination with the Central Library.
- The college has 17 classrooms of different sizes. Equipped with projectors and some of them are equipped with a smart board.
- Three video conference rooms
- Meeting rooms and offices for college committees and units.
- Blackboard: It is an electronic system for communication between teachers and their students.

## Classrooms, laboratories and equipment

The department responsible for the program currently contains four computer laboratories, each of which has twenty computers with programs installed to be used to teach all the courses of the program. The department also benefits from the laboratories of other departments and colleges. As laboratories of the Computer Engineering Department, which are equipped with computer devices installed with programs used to teach programming courses and simulation programs used in teaching some courses such as data communication, networks and digital control. The department also currently contains logic design laboratories, electronics and electrical circuits that contribute effectively to the quality of the educational process.

## E-learning

Students of the program can benefit from Blackboard as an educational system to provide educational or training programs to students or trainees at anytime and anywhere, as well as by using interactive information and communication technology such as (Internet, TV channels, e-mail, computers, and teleconferences ...) in a synchronous or asynchronous manner.

E-learning can be considered a method of education that depends in providing educational content and conveying skills and concepts to the learner on information and communication technologies and their multiple media in a way that allows the student to actively interact with the content, the teacher and colleagues simultaneously or asynchronously in time, place and speed that suit the circumstances of the learner and his ability, and the management of all activities The educational scientific and its requirements in electronic form through the electronic systems designated for that purpose.
